

REIX Launches Innovative Cyber Security Program

An innovative program that protects registrants from cyber attacks has been launched by REIX.

The **FREE** program, called **Cyber Shield**, includes best practices in securing computer systems against hackers, 24/7 expert advice and support for users and, as a final protection, cyber insurance in the event of a cyber attack for registrants trading in real estate or property managers registered with SREC.

This simple, fully integrated program was designed specifically for subscribers and developed in partnership with a team of cyber experts. It helps highlight where subscribers are at risk, how they can protect themselves, their business and their clients – all at no cost.

Cyber attacks, such as viruses, ransomware, and hacking, are on the rise – a fact that prompted REIX to create this unique, simple solution, which covers all registrants trading in real estate, as well as property managers registered with SREC.

REIX has also developed a special Cyber Shield Broker Series PowerPoint specifically for brokers to present to their team, along with additional resources to help them understand Cyber Shield's full benefits, what it means for brokerages and how it furthers their agents' risk management education.

A host of other resources, including FAQs, helpful links, videos and contact information for DynaRisk, REIX's cyber experts, is also available to everyone on [REIX's new cyber webpage](#).

REIX is encouraging all subscribers to sign up for the cybersecurity protection Cyber Shield provides. To register, [START HERE](#) to access DynaRisk's online portal.

REIX Cyber Shield: Protecting you and the consumers you serve through an innovative cyber security program that provides 24/7 personal cyber support, cyber insurance and ongoing risk management.
